Take a look in my thread called "Just regular movies ". I also thought filters was the begin all end all. I realized my mistake.

Filters are a great and necessary tool. But they don't solve the problem entirely, even just because of the reason you mentioned, that there's always another device. Also, make sure not to give yourself the subtle message that you will for sure give in if you encounter an unfiltered device, because it makes it more likely that you will.
